THE PENNSYLVANIA STATE DATA CENTER PROGRAM

PENN STATE • HARRISBURG

THE CONCEPT

The Pennsylvania State Data Center (PSDC) Program has been established to improve access to and use of statistical resources available from the United States Bureau of the Census and other sources. Census Bureau products that can be accessed through this PSDC Program include all major statistical programs covering such areas as: population, housing, agriculture, manufacturing, retail and wholesale trade, governments, etc. Data are generated in printed reports, microfiche, and computer files. Information and services are available through the PSDC office at The Pennsylvania State University At Harrisburg, The Capital College, the Pennsylvania State Library, or through the network of Affiliate Data Centers (ADCs) located across the Commonwealth.

THE PENNSYLVANIA STATE DATA CENTER

Data Products and Services

The PSDC located at The Pennsylvania State University At Harrisburg, The Capital College will provide products and services to any interested user. State agencies, local governments, businesses, nonprofit organizations, or researchers may all obtain information housed and generated by the PSDC. Costs incurred by the PSDC in providing products and services will be charged to the user.

Products and services available through the PSDC are:

- Census Bureau printed reports and microfiche
- Census Bureau reference maps
- PSDC printed reports
- Consultation on data availability and use
- Computer tape processing
- Demographic and geographic profiles
- Research survey processing and analysis
- Statistical mapping and geoprocessing
- Downloading of information onto microcomputer diskettes
- Zip code profiles
- Population Estimates and Projections

Training and Information

The PSDC facilitates education and training in the use of statistical resources by participating in conferences, workshops, and training courses throughout the state. The PSDC also publishes a periodic newsletter about user services and new statistical products.

If you would like information about training sessions or would like to receive copies of the newsletter please contact the Pennsylvania State Data Center at (717) 948-6336.

The Center

The PSDC is prepared to assist you in meeting your data and information needs. The center is open daily from 9:00 a.m. to 5:00 p.m. For information, please contact:

PENNSYLVANIA
1986 Population and 1985 Per Capita Income Estimates for Counties and Incorporated Places:

This report contains current estimates of July 1, 1986 population and calendar year 1985 per capita money income for all general purpose governmental units in Pennsylvania. These estimates are used by a wide variety of federal, state, and local governmental agencies for program planning and administrative purposes.

The figures shown in the tables are for areas defined under the provisions of various Federal revenue distribution programs and may not coincide with the areas covered in the latest decennial census. Areas included in this report are (1) counties ; (2) incorporated places; and (3) active minor civil divisions (MCD's), i.e., cities, townships and boroughs.

The detailed tables show the July 1, 1986, population estimate and the April 1, 1980, census population for each area, along with the percent change between 1980 and 1986. In addition, shown are the 1985 per capita money income estimates, together with the 1979 per capita money income and the percent change between these two figures.

These estimates are presented for each municipality in the state in county order. When incorporated places fall in more than one county, each county piece is marked "part," and totals for these places are presented at the end of the table (page 69). These "parts" are not included in the rankings, however; the total are ranked as single municipalities.

POPULATION ESTIMATES METHODOLOGY

Subcounty Areas

To estimate the population of each subcounty area, a component procedure was used in which each of the components of population change (births, deaths, net migration, and special populations) was estimated separately. These components of change cover the time period from July 1, 1984, to July 1, 1986. They were added to the July 1, 1984, base population to determine a July 1, 1986, estimate. This procedure is known as the Administrative Records method.

July 1, 1984, base population. For most areas, the base population is identical to the July 1, 1984, estimated population. Differences from the 1984 estimates are generally the result of census corrections, annexations, or successful challenges by individual local governments.

Census corrections. For some areas, errors in the 1980 census have been identified and subsequent corrections made. All available corrections to the 1980 census are reflected in the base population.

Annexations. The base population also reflects certain annexation activity that occurred between April 1, 1980, and December 31, 1983. Annexations are included only if the Census Bureau has determined an official April 1, 1980, population for the annexed area from 1980 census records. This determination is done routinely for places with populations greater than 5,000 for which the annexed area comprised over 5 percent of the total population. For other areas, it is done by request on a fee-paid basis.

Changes due to challenge. If a change in the July 1, 1984, population estimate was made as a result of a challenge from the local government and the resolution of the challenge occurred after publication of the original July 1, 1984, population estimate. the revised July 1, 1984, population figure was used as the base for the 1986 estimate.

Natural change. Reported resident birth and death statistics were used for counties. These data were collected from the Pennsylvania Department of Health by the Pennsylvania State Data Center, participating with the Census Bureau under the auspices of the Federal-State Cooperative Program for Local Population Estimates (FSCPE). For subcounty areas, births and deaths were estimated using local fertility and mortality rates and demographic data from the census. The results were controlled to match the reported figures for counties.

Migration. Federal income tax data were used to measure migration by comparing tax data for 1984 and 1986. A net migration rate was derived for each locality, and was applied to a base population to yield an estimate of net migration for all persons in the area. Immigrants from abroad are added based upon data from the U.S. Immigration and Naturalization Service.

Adjustment for special populations. In addition to the above components of population change, estimates of special populations were also taken into account. Special populations include persons who are residents of an institution, college dormitory, or military barracks. Data for these groups are collected from the specific institutions involved.

Counties

Estimates of the population of counties, independent cities, cities whose boundaries are coextensive with a county, and cities made up of more than one county are, for the most part, identical to the provisional July 1, 1986, county estimates published in Current Population Reports, Series P-26, No. 86-A description of the methodology used in developing these estimates can be found in that report.

States

The estimates for counties were adjusted to agree with population estimates for each State. The State estimates were prepared using two procedures: the Administrative Records method that is described above for counties and a composite method that develops estimates for several age segments of the population and sums them to obtain a total. The methods are described in more detail in Current Population Reports, Series P-25, No. 970.

PER CAPITA INCOME METHODOLOGY

The 1985 per capita income (PCI) figure is the estimated average amount per person of total money income received during the calendar year 1985 for all persons residing in a given political jurisdiction. The 1985 estimates are based on the 1980 census and have been updated using rates of change developed from various administrative record sets and compilations, mainly from the Internal Revenue Service (IRS) and the Bureau of Economic Analysis (BEA).

The PCI estimates are based on a money income concept. Total money income is defined by the Bureau of the Census for statistical purposes as the sum of:

Wage or salary income

Net farm self-employment income

Net farm self-employment income

Interest, dividends, and net rental income

Social Security and Railroad Retirement income

All other regularly received income such as Veterans' payments, pensions, unemployment compensation, and alimony.

Receipts not counted as income include various "lump-sum" payments such as capital gains or inheritances. The total represents the amount of income received before deductions for personal income taxes, Social Security, bond purchases, union

dues, Medicare deductions, etc.

Procedures for State and County Estimates

As noted above, the 1985 State and county PCI estimates were based on the 1980 census. The updates for States were developed by carrying forward the aggregate amount (i.e., the sum of all individual incomes in the State) independently for each type of income identified in the census to reflect differential changes in these income sources between 1979 and 1985. Federal tax data from 1979 and 1985 were used to estimate the change in wage or salary income at the State or county level. All other types of income for these governmental units were updated using rates of change based on estimates of aggregate money income provided by BEA.

At the county level, several modifications of these procedures were used to obtain a better estimate of income change. For example, the IRS data for county jurisdictions were subject to nonreporting of address information on the tax return and to misassignment of geographic location for reported addresses. To minimize the impact on the estimates from such potential sources of error, per capita wage or salary income for counties was updated intact as a per capita figure using the percentage change in wage or salary income per exemption reported on IRS returns. In addition, because of differences in the definition of income, data collection techniques, and estimation procedures, 1979 income estimates from the census and BEA were not strictly comparable. These differences were more especially evident at the county level for nonfarm and farm self-employment income. BEA estimates for these types of income tend to have considerably more year-to-year variation than estimates derived from surveys and censuses. To minimize the effects of these differences, constraints were imposed on the rate of change in income from these sources in developing the 1985 PCI updates.

As a final step to ensure a uniform series of estimates at the State and county levels, the updated county per capita figures were converted to a total aggregate income and were adjusted to agree with the State aggregate level before a final county per capita income was calculated.

Procedures for Subcounty Per Capita Income Estimates

The 1985 PCI estimates for subcounty governmental units were developed using a methodology similar to that used to derive the county-level figures. However, there are differences in the number of separate categories of income types used in the estimation procedure, and in the sources used to up-date the income components. The 1985 estimates were up-dated from the 1979 figures. It should be noted that in the process of estimating 1985 per capita income, the 1979 base estimates were

updated to reflect annexations and other geographic changes through December 31, 1985. The 1979 figures which appear in this publication reflect those changes. Administrative data obtained from BEA include revisions to income data for years prior to 1985, as well as original 1985 data. In order to estimate 1985 per capita income, an updated 1983 base estimate was produced.

1979 Base Estimate

The 1980 census PCI figures for small areas are subject to sizable sampling variability, causing them to lack sufficient statistical reliability for use in the estimation process. For this report, the 1979 PCI shown for subcounty areas with a 1980 census sample population estimate of less than 100 is the 1980 census PCI figure for the county.

For subcounty updating, the 1979 total money income was divided into two components:

1. Taxable income which is approximately comparable to that portion of income included in IRS adjusted gross income, and

2. Transfer income such as Social Security and Public Assistance payments, which for the most part are not included in adjusted gross income.

1985 Per Capita Income Updates

The taxable income portion of the 1979 money income was updated using the percent change in adjusted gross income (AGI) per exemption as computed from IRS tax return data. However, if the number of IRS for any area was very small, or if the ratios of exemptions to the population or the change in the ratios for any update period were not within an acceptable range, the IRS data for the subcounty area was not used in the update process. In such cases, the average percent change in AGI per exemption for similar governmental units was used. Similarly, if the IRS data for a particular subcounty areas passed the above conditions, but the percentage change in AGI per exemption was excessively large or small as compared with that for similar units in the county, the change was constrained to as proportion of the average change of similar units.

Because of a lack of information about transfer income below the county level, the percentage change in per capita transfer income at the subcounty level was assumed to be the same as that implied by the BEA estimates at the county level.

The estimates of per capita taxable income and transfer income were multiplied by population and adjusted separately to the county controls and were then combined to produce total money

income. The PCI estimates were formed by dividing the total money income aggregates by the population estimates. As with the 1979 estimates for subcounty areas with a 1980 population of less than 100, the 1985 county PCI was used.

ACCURACY

In order to assess the accuracy of the population estimates for subcounty areas, a set of April 1, 1980, estimates was produced for evaluation by comparison to the 1980 decennial census counts. The results of the comparison between the April 1, 1980, test estimates for population and the April 1, 1980, census counts are presented in table A.

Table A. Selected Measures of the Accuracy of Subcounty Population Estimates: 1980

Size of area (population)	Number of areas	Average absolute percent error	Percent positive errors	Less than 10 percent	10.0 to 19.9 percent	20 percent or more
Total	35,644	15.2	48.5	51.9	24.5	23.6
Less than 100	2,425	35.1	55.1	21.4	20.0	58.6
100-499	11,085	19.8	52.8	37.5	26.9	35.6
500-999	6,613	13.2	46.5	52.2	27.7	20.2
1,000-2,499	7,141	11.6	43.9	58.6	26.3	15.1
2,500-4,999	3,348	9.6	43.0	66.7	22.6	10.6
5,000-9,999	2,212	8.3	45.8	72.3	20.6	7.1
10,000-24,999	1,740	6.5	51.7	80.6	14.4	4.9
25,000-49,999	636	5.5	52.7	84.9	11.9	3.1
50,000-99,999	284	4.5	46.5	93.3	6.0	.7
100,000 and over	160	3.9	36.9	95.6	4.4	.0

The average absolute percent error for all areas was 15 percent. The average error varied sharply by size of area, from a low of 4 percent for areas with a population of 100,000 or greater to a high of 35 percent for areas with population less than 100. The relatively high overall average error was due in part to the preponderance of small areas. Approximately 76 percent of the areas estimated had less than 2,500 people. For areas with population greater than 2,500, the average absolute percent error was 8 percent.

Approximately 49 percent of the estimation errors were positive, indicating virtually no bias. For areas with population of 100,000 or more only 37 percent of the errors were positive, indicating a fairly strong negative bias. Estimates for areas in the 1,000-4,999 size range also had a negative bias, with 44 percent of the estimates being greater than the census count. Some of this negative bias may be attributed to the relatively large underestimation of the national population in

1980 (approximately 2.5 percent).

The estimates for approximately 24 percent of the areas had an absolute error of 20 percent or more. Of these, 80 percent were in areas with populations less than 1,000 persons. For areas with populations of 10,000 or more, only 4 percent had errors of 20 percent or more.

The availability of the 1980 decennial census data provided the first opportunity for the comprehensive testing of the Administrative Records method and alternative estimation procedures. A program of research and testing was conducted in an effort to improve the accuracy of the estimates to be used for the 1980's, especially for small areas. Substantial improvements were made in the birth and death estimation procedures, the migration rate calculations, and the immigration estimates. These changes should result in a significant increase in the accuracy of the estimates.

To evaluate the per capita income estimates for 1979, the file containing the administrative estimates was matched to a file containing per capita income figures from the 1980 decennial census. Matches were achieved for all States, 3,129 counties, and 41,048 subcounty areas. (More than one area is required for some incorporated governmental units.)

The average absolute percent error in per capita income for all matched subcounty areas was 17.0 percent. (See table B.) This compares with 1.9 percent for all States and 6.5 percent for all matched counties. Subcounty areas of 50,000 persons or more averaged 4.7 percent error in per capita income, compared with areas of populations less than 100 with an average error of 62.5 percent.

Table B. Selected Measures of the Accuracy of Subcounty Per Capita Income Estimates: 1979

Size of area (population)	Number of areas	Average absolute percent error	Percent positive errors	Less than 10 percent	10.0 to 19.9 percent	20 percent or more
Total	41,048	17.0	47.8	50.2	26.2	23.6
Less than 100	2,858	62.5	49.2	18.9	18.1	63.1
100-499	10,697	21.7	48.6	33.6	26.7	39.8
500-999	7,005	13.9	48.2	45.2	31.1	23.7
1,000-2,499	8,640	11.2	48.0	54.8	30.1	15.2
2,500-9,999	7,599	8.6	46.7	67.0	25.6	7.4
10,000-49,999	3,560	6.4	44,1	80.3	16.6	3.1
50,000-99,999	420	4.8	50.2	87.4	11.7	1.0
100,000-249,999	187	4.8	57.8	89.3	10.7	0.0
250,000-499,999	55	4.0	65.5	94.5	5.5	0.0
500,000-999,999	18	3.4	55.6	100.0	0.0	0.0
1,000,000 or more	9	3.4	77.8	100.0	0.0	0.0

A slight negative bias may be indicated by the fact that for about 52 percent of the subcounty areas the administrative estimates were less than the decennial census figures. For areas with population over 100,000 the percent of positive errors exceeded 50 percent, for areas with population 50,000 to 100,000 the number of positive and negative errors were about the same, and for areas with population less than 50,000 more than half the errors were negative.

As the size of the population of subcounty areas decreased, generally the spread in the errors increased. For areas with population over 100,000 no error was more than 20 percent, while for areas with 2,500 to 10,000 persons, 7.4 percent of all estimates had errors of 20 percent or more, and for the smallest areas, less than 100 persons, 63.1 percent of all estimates had such errors.

Broadly speaking, the measures in table B reflect the net effect of three different principal sources of error: sampling error in the 1970 census, error in predicting change from 1969 income to 1979 income, and sampling error in the 1980 census. Additionally, nonsampling errors in the 1970 and 1980 census figures also contribute to the overall error. Thus, the figures in table B exaggerate the actual error in the estimation procedure particularly for subcounty areas below 2,500.

* Totals for Places whose municipal boundries are split by county lines as indicated by "(part)" in the Municipal Tables

AFFILIATE DATA CENTERS

The purpose of the Affiliate Data Center (ADC) network is to more directly meet the needs of local users. The ADCs maintain a publicly accessible collection of census materials and reports. They have personnel trained to assist data users in locating data items and are available for consultation. The ADCs provide a wide range of products and services on a cost recovery basis. Users are urged to direct requests for census information to their nearest Affiliate Data Center. The ADC will make referrals to the PSDC or another affiliate if it cannot handle your request.
